

conservation curriculum through a series of hands-on activities. The program's success is attributed to the support of local sponsors and the participation of the students themselves. Through the program, students have developed a strong sense of environmental stewardship and a commitment to the conservation of their natural resources.

With funding from the AZA Conservation Endowment Fund (CEF), the Chicago Zoological Society (CZS) and the National Geographic Society (NGS), the program has been able to provide a wide range of educational opportunities to students in Botswana. The program's focus is on the conservation of the Okavango Delta, a unique wetland ecosystem that is home to a variety of rare and endangered species.

The program's activities include field trips to the Okavango Delta, where students learn about the importance of the ecosystem and the role of the local community in its conservation. Students also participate in hands-on conservation projects, such as tree planting and water conservation initiatives. Through these activities, students are able to gain a deeper understanding of the challenges facing the environment and the importance of taking action to protect it.

The program's success is a testament to the power of education and community-based conservation. By providing students with the knowledge and skills they need to become environmental stewards, the program is helping to ensure a sustainable future for the Okavango Delta and the people who depend on it.
